Prior Education

The London School of Economics and Political Science 2017–2018

MSc in Econometrics and Mathematical Economics, *Distinction*

The London School of Economics and Political Science 2014–2017

BSc in Econometrics and Mathematical Economics, *First Class Honours*

Fields

Primary	Labor, Health
Secondary	Public

Job Market Paper

"Housing Market Shocks and the Persistent Decline in U.S. Fertility".

Fertility in the United States declined sharply following the Great Recession and has remained persistently low despite the subsequent economic recovery. This paper examines whether the housing bust contributed to this sustained decline. Using variation across metropolitan areas in the severity of the housing bust, I show that more exposed MSAs experienced substantially larger declines in fertility after the recession. These effects persist through 2022, are similar across several measures of housing-market exposure, and are not explained by differential deterioration in local labor markets. The fertility response also persists even as mortgage lending and residential construction recover from their recession lows. To investigate potential channels, I examine housing and household outcomes among young adults. Young adults in more exposed MSAs became more likely to live with their parents and less likely to form partnered households, own homes, and move. The persistence of the fertility effects across successive cohorts of young women suggests that the response was not confined to those directly exposed to the housing bust during young adulthood. These findings suggest that persistent disruptions to housing and household transitions following the housing bust contributed to the long-run decline in U.S. fertility.
